

Devansh Amdavadwala

Android Software Engineer · Kotlin & Jetpack Compose · AI/ML Enthusiast

+91 94295 09806 | devanshamdavadwala@gmail.com | devansh.amdavadwala.com | LinkedIn | Surat, Gujarat, India

PROFESSIONAL SUMMARY

Results-driven Android Software Engineer with 2+ years of production experience shipping apps to hundreds of thousands of users globally. Demonstrated expertise in Kotlin, Jetpack Compose, MVVM/Clean Architecture, Hilt DI, Room, Firebase, and CI/CD — directly aligned with Janitri's SDE2 requirements. At Chaintech Network, led a full Navigation 2→3 migration and performance-critical animation engineering on a fintech app serving 350K+ active users. Passionate about building reliable, scalable, and impactful products — eager to apply deep Android skills toward improving maternal and newborn health outcomes.

PROFESSIONAL EXPERIENCE

Associate Software Engineer · Chaintech Network · BCS Network

Jan 2026 – Present

IXFI – Gen 3.0 Crypto Exchange (350K+ active users · 100+ countries)

- Architected and delivered a full Navigation 2 → Navigation 3 migration in Jetpack Compose — covering deep links, payment flows, and back-stack logic with complete JUnit/Espresso test coverage — eliminating navigation-related crashes and reducing regression risk across all future releases.
- Engineered performance-optimised Compose animations and micro-interactions on a fintech app with 350K+ active users, driving measurable improvements in retention and session-depth metrics; participated actively in code reviews to enforce coding standards.
- Leveraged Firebase Analytics, Remote Config, and FCM for real-time A/B testing and push notification workflows; applied WorkManager for reliable background task scheduling.

CMP Charts – Compose Multiplatform Open-Source Library

- Designed and shipped Word Cloud and Waffle Chart components extending cross-platform coverage to all 4 targets (Android, iOS, Desktop, Web) — demonstrating ownership of the full build lifecycle and release management process.

AI Strategy & Next-Gen Product Development

- Led in-depth R&D on LLMs, RAG pipelines, and vector databases; delivered structured technical documentation that shaped the company's AI product roadmap and saved 2–3 weeks of exploratory work.

Android Developer · Argon IT Services LLP

Jun 2024 – Nov 2025

- Shipped 6+ production Android apps in Kotlin and Jetpack Compose achieving avg. 4.6+ star ratings and 50K+ combined downloads, applying MVVM/Clean Architecture and Material Design 3 — improving user satisfaction scores by 18%.
- Reduced app crash rate from 5.8% to 0.7% through systematic error handling, robust exception management, and automated testing with JUnit and Espresso — directly improving Play Store ratings.
- Cut API response times by 35% via Retrofit + OkHttp caching strategies; compressed release cycles from 1 week to 2 days by automating CI/CD pipelines with GitHub Actions — shipping features 3.5x faster.
- Implemented Dagger/Hilt for dependency injection and Room Database for local storage across multiple production apps, ensuring maintainability and testability at scale.
- Collaborated cross-functionally with Product, Design, and QA teams to define feature requirements, conduct code reviews, and uphold best practices — mentoring junior teammates on architectural decisions.

TECHNICAL SKILLS

Languages	Kotlin (primary), Java, TypeScript, Dart
Mobile	Android SDK, Jetpack Compose, Compose Multiplatform, XML Layouts, Jetpack Libraries (ViewModel, LiveData, Navigation, WorkManager)
Architecture	MVVM, Clean Architecture, App Modularization, Dependency Injection (Hilt, Koin)
Async	Coroutines, Kotlin Flow
APIs & DB	RESTful APIs, Retrofit, OkHttp, Room Database, SQLite, GraphQL, Ktor
Firebase	Authentication, Firestore, FCM, Analytics, Remote Config, Crashlytics
Testing	JUnit, Espresso, ProGuard/R8
DevOps / CI-CD	Git, GitHub Actions, Docker (learning)

Backend/Cloud	AWS S3, Supabase, MongoDB
AI/ML	LLMs, RAG, AI Agents, Vector Databases (active R&D)
Tools	Android Studio, Figma, Postman, Jira, Agile/Scrum

NOTABLE PROJECTS

GradNet – Graduate's Network

- Built a Kotlin/Compose Multiplatform job-matching platform integrating RESTful APIs, GraphQL, Firebase Auth/Firestore, Room, and Dagger/Hilt with full CI/CD — demonstrating end-to-end product ownership across Android and multiplatform targets.

Caller – iPhone Style Dialer

- Engineered a high-fidelity iOS-style Android dialer in Kotlin/Compose with MVVM architecture and ProGuard/R8 optimisations — achieving native-feel UX while maintaining production performance benchmarks.

EDUCATION

Bachelor of Computer Application · SDJ International College, Veer Narmad South Gujarat University *Jun 2022 – Jun 2025*

- Specialization in Mobile Device Application Development
- Won multiple inter-college hackathons, demonstrating applied problem-solving under competitive conditions

CERTIFICATIONS

- Android App Development Specialization
- The Complete Android Developer Course
- Java & Kotlin Programming for Beginners
- Postman API Fundamentals Student Expert
